Get Instant Notifications of Production Line Issues with ATS Inspect

Identifying issues within your manufacturing process is essential for keeping unnecessary costs at a minimum. Read on to find out how ATS Inspect lets you see those issues as soon as they arise.

Lines of Communication

Production costs will always include a number of unwanted extras. Beyond the basic materials and man hours are the unknown variables that appear when things go wrong, such as defects or incorrect components.

This is where ATS Inspect thrives. Defects and trends can be identified as soon as they appear and the relevant information can be sent directly to the appropriate people.

The Right Information to the Right People

Production line operators, maintenance engineers, line managers and site managers will all need different information to do their job effectively.

ATS Inspect can keep them all up to date. From an alert about a single defect to the status of an ongoing quality campaign, the right information will reach the right people right away.

Receive notifications no matter where you are

Following Trends

To allow production line operators to see what defects are being caused to the product, and to allow management to know where they occur the most in the production process, ATS Inspect can send the information in real-time to overhead displays within the production plant.

This gives real-time feedback to the point of origin of the quality issues, where the appropriate information can translate into process improvement automatically.

Overhead displays give clear information to the floor

Instant Event Notification

ATS Inspect can instantly inform personnel when a quality threshold is crossed or an event takes place. It is fully customizable and can be configured to send alerts for almost any kind of event. For example:

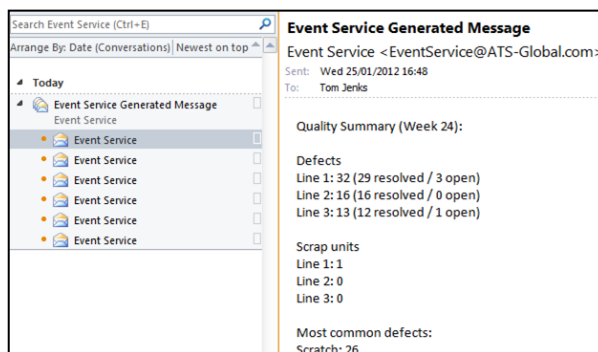

- ▶ **Defect triggers** – a specific concern occurs on a specific component.
- ▶ **Quantity per time triggers** – a specified number of defects are recorded within a preset time limit.
- ▶ **Quantity per unit triggers** - a specified number of defects are recorded within a preset number of units.

Scheduled Status Updates

If you need that weekly quality status update for your 9am Monday morning meeting but there's no-one available to collate it until 10am then it's of little use to you.

ATS Inspect is prepared for this and can send you quality updates as and when you need them. These updates can be sent at regular intervals or at set times.

The status updates can be fully configured to your needs and give you the numbers you require, from a general overview of the quality levels in the plant to the PPM of a single machine.

Example scheduled report sent as an email

Choose Your Output

As you can see ATS Inspect can send you a whole plethora of event notifications and reports. Whatever output device you need to receive the data on can be accommodated, whether it be an overhead display, an email or even an external system.

ATS is an **Independent Solution Provider**, with over 30 years' experience in the manufacturing systems arena and a wealth of experience undertaking Continuous Improvement initiatives and Manufacturing IT solution design, deployments and 24/7 support assignments.
