v21.4.0.900

General Notes

Build Date: June 24, 2016

New Features

1. New Thumbnail Format – PNG

Output Thumbnails are now created as the PNG image type, instead of a BMP file.
TFS 34822

v21.3.0.900

General Notes

Build Date: April 22 2016

Program Fixes

CM4D Reporter

Corrected item	What it means
Observer mode not working	Connecting to external Reporter databases using Reporter Observer mode is not functioning. TFS 34438
Six Sigma (multi-char) report not correct.	Six Sigma (multi-char) report not correct in Reporter. Each page in the report starts over with the first row of data, resulting in the same Six Sigma chart on every page. *Solution: This fix required a change to the '4Reporter.4dc' config template. If you do not use the default template that comes with this version of the installer (or newer), you must make these changes manually to your Reporter template in Classic.* TFS 13144

DataUtility

Corrected item	What it means
New Sample filters are not being saved	When creating a new Sample filter in DataUtility, it is not saved after the filter dialog is closed and reopened. TFS 23579

v21.0.5.900

General Release Notes

- Build Date: January 13 2015
- Schema 21a

1. ATS Licensing 2.1

A new version of ATS Licensing has been released that will need to be used with v21 of ATS CM4D Reporter (installed version only). The ATS Licensing Server version 2.1 includes some new features:

- Separate Licensing Monitor
- Use Different License Databases
- Search Criteria for Licenses
- Named Leases Include Computer Name
- Approve/Reject Lease Requests
- Release Licenses
- Optional Backup License Server Connections

Please see the ATS Licensing documentation for more information.

2. New Application Icons

For this version, look for some new application icons:

r4	ds	du
CM4Dr	DataSmith	DataUtility

These will be easier to recognize, even when using the smallest size.
TFS 24827

New Features

3. Modify Sample Properties

Properties of a Sample, such as Label, Description and Filter, can now be modified via a Properties dialog.

Sample : UNIT-3117 ^ Stub Lugs ^ ?H

Label: UNIT-3117

Description:

Filter: Supplier | Banal

OK   Cancel

TFS 18749

4. Feature Marker for Range Characteristics

Range characteristics now have a unique feature marker type.

TFS 22909

5. Reset the Bar State

If at any time you want to reset the toolbars to their default state/placement, you can add the parameter `-ResetState` to the command line. When CM4D Reporter or DataSmith is run with this command line argument, all toolbar/window/tree states will be reverted.
TFS 23953

6. Enhancements to Logging

All error messages will now be written inside the standard log (*.log) files. Files with the extension *.err will no longer be created.
TFS 24551
