

ATS CM4D fills the gap between the virtual design world of Computer Aided Design and the physical world of manufacturing.

It highlights differences between the geometric design specification and the "as built" data from a manufactured item. Tackling these issues allows manufacturers to attain the highest quality possible.

With Effective Data Retrieval...

- Retrieve dimensional data from any device
- Universal dimensional data translator
- Quick and easy configuration

And Essential Reporting and Analysis...

- Web publishing and analysis
- Enterprise-wide reporting
- Completely customizable reports
- Automated scheduled reporting

The Benefits Are Measurable

- Base your decisions on the latest information
- Improve quality and consistency
- Allocate resources where they're needed most
- Enhance global coordination
- Reduce buyoff time and effort

An Award Winning Metrics Solution

Providing Dimensional Data Analysis for Leading Global Manufacturers
